# Car Wash Wall Cleaning Procedure

1. For initial wall cleaning or cleaning of heavily soiled walls, use Vision straight.
2. Using a VTL Foam Maxx applicator or garden sprayer, apply Vision to one section of the wall or equipment, working in 3-4 foot sections. Apply Vision from bottom to top.
3. Let Vision soak on the wall or equipment for 60-90 seconds, no longer.
4. Working from top to bottom, use a high pressure sprayer or pressure washer to remove the film from the walls and equipment. Please note that heavily soiled areas may require scrubbing with a deck brush.

**Alternative Method:** If you do not have a high pressure sprayer, agitate Vision on the wall surface using a deck brush or mop. Light agitation will remove most road film from the walls. Heavily soiled areas may require additional scrubbing. Rinse the walls with clean water working from top to bottom.

**Daily Wall Cleaner:** If using Vision as part of a daily maintenance program, dilute 1:5-10 in water and follow above instructions.
