

MAGMA SHINE

What is Magma Shine???

- A premium automotive protectant for the discerning customer
- Protectant is applied through a high volume arch in the car wash
- A combination of hard shell carnauba wax and advanced silicone protectant

Carnauba wax

Why do I want Magma Shine???

- Beautiful, shiny finish on your car
- Leaves a slick visual and tactile feel
- Protects your car from the harmful effects of bugs, bird droppings, UV rays, airborne contaminants

Should I be worried about bugs, UV rays and the other things mentioned???

- Insect activity and bird droppings are acidic and will eat away at your car's finish
- Airborne pollutants can damage the car surface in a variety of ways
- Ultra-violet rays (sunlight) are the most well known contributor to paint fading – if you haven't been protecting your car, the integrity of your body paint color is threatened
