

# Skipping a car wash because it might rain?

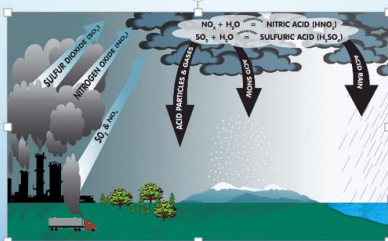

Wash and protect your car  
**BEFORE** it rains!

## Did you know that rain makes cars dirty??

- Raindrops collect up pollen, pollutants, dust and smoke in the air and deposit them on your car. The raindrop dries, leaving the particles on your car.
- *The clean, fresh smell of the air after it rains is a result of particles being deposited somewhere (like **your car** or on the road, ready to be splashed back up on to your car)!*

Acid Rain comes in many forms...are you protecting your vehicle?

- RAIN
- SNOW
- FOG
- PARTICLES IN THE AIR
- GASES

*If there is rain in the forecast, consider getting a protective service with your wash today!*
