

**Q: Why do I need **WHEELBLASTER** tire and wheel cleaner?**

**A: Brake dust is unsightly and ruins the coatings on your wheels over time. **WHEELBLASTER** is preventative maintenance for your wheels.**

- If you allow brake dust to sit on your wheels for a prolonged period of time, it can eat into the coating (if there is one) and pit the metal.
- Brake dust is made of an adhesive and carbon fibers that come off the brake pad and tiny metal shavings from the rotor.
- The intense heat and friction generated by the wheels makes this mixture *highly corrosive*.
- Because you probably drive every day, more brake dust is constantly being made.
- **Frequent cleaning** with **WHEELBLASTER** is the only way to keep your wheels safe.
