

# RECLAIM COMPATIBLE PRODUCTS

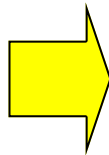

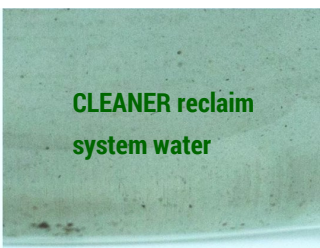

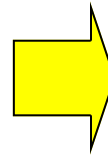

Do you have a reclaim system that stinks? Do you waste time and money adding bleach, fragrances, degreasers, bacteria tablets, hydrogen peroxide and other substances into your system? Are you worried that you are losing customers who don't want to use a smelly car wash?

Do you know that you can say goodbye to the additive routines and reclaim smells by using VTL's True Reclaim Compatible carwashing products?

**What's the problem?** Water, soils, soaps and surfactants can result in smelly anaerobic bacteria growth (hydrogen sulfide, commonly known as the smell of rotten eggs).

You try expensive additives to fix the stink, which might work for a short period. Your equipment clogs up more often. Your cars may not be that clean. Customers might be avoiding your smelly wash.

**No odors and no additives required.** Equipment functions better. Cars come out cleaner, brighter, better. Happy customers will return to get their cars washed at a pleasant smelling wash.

**How long does it take to get rid of the smell?** Car wash owners who have switched to VTL reclaim compatible presoaks, foam detergents, protectants, drying agents, triple foams and more have noticed a dramatic change in as little as **one week**.

Your reclaim system water can improve just like the systems of our customers using reclaim compatible carwashing products. Find out how easy it is to get rid of reclaim odors and clean cars better.
