The VAULT System

1/4" Barb

Connects securely to the check valve for easy chemical tubing attachment.

Check Valve

Check valves connect to the chemical draw tube for seamless, air-free chemical flow.

Grommet

Stabilizes the draw tube in place and prevents unwanted air or debris from entering the container.

Chemical Draw Tube

Constructed from durable PVC, compatible with all VAULT chemicals, and designed with an angled bottom for optimal chemical flow.

1-Gallon Product

Gallons are sealed with a foil liner pierced by the VAULT lid when inverted, creating a no-touch system. Empty gallons stay in place to prevent debris or air entry.

VAULT Lid

Lid secures tightly to the chemical tank and supports up to 4 draw tubes.

Chemical Container

10-gallon tank includes a decal for easy inventory tracking.

Chemical Labeling

VAULT products and tank labels have designs with colors, codes, names, and icons for safe, easy identification.

WATER EFFICIENCY:

Reclaim-compatible chemistry ensures top cleaning performance, enhances water efficiency, reduces buildup, and rinses easily – cutting freshwater use and maintenance while extending equipment life.

VAULT's full reclaim compatible product line promotes sustainability, cost savings, and operational excellence without compromise.

EXCEPTIONAL SERVICE:

At Ver-tech Labs, we deliver more than high-performance chemistry – we offer a true partnership. Family-owned and operated, we provide expert support, tailored solutions, and exceptional service to streamline operations and boost profitability.

With VAULT concentrates, our professionals work alongside you to customize solutions for your operations and provide ongoing expert support.
